Aller P DMC portable

- Appropriate for car, office and smaller areas

The new natural device for Asthma, Eczema & Allergy sufferers

Product Features

- Reduces allergens produced by dust mites
- Reduces dust mite population
- Drug-free
- Easy to use
- Safe for humans & pets
- Scientifically and clinically proven
- CE marked

Clinical and Scientific trials show

- Reduction in allergens (faecal matter) caused by the disruption of the feeding cycle
- Population of dust mites greatly decreases
- Reduction of drug intake
- Helps prevent allergies

The Dust Mite controller works by emitting an ultrasonic sound, which disrupts the feeding and reproductive/growth cycles of dust mites. This reduces the population of dust mites and therefore the allergens produced.

Cert ISO 13485:2003
MD 92931

Approximately 25% of the world's population are affected by allergic disorders most of which are caused by inhaling allergens.

Dust mites are the number one producer of indoor allergens.

Uncontrolled environments can cause exposure to allergens and can lead to the development of asthma, eczema and pollen based reactions.

One in every three children is in some way allergic to dust mite allergens.

The Dust Mite Controller is an easy to use, effective, natural device that reduces the population of dust mites and the allergens that they produce. The Aller DMC dust mite controller covers a volume of 62.8m³ and the Aller P DMC covers a volume of 3m.

It uses no chemical substances and is ecologically friendly, emitting a range of ultrasonic sound that is harmless to humans and pets.

This interferes with the feeding and reproductive systems of the dust mites and results in a reduction in allergen production and dust mite population, hence a positive impact on human environments.

Research findings & Clinical Trials evidence

- **Trials on patients using the dust mite controller over 3 months showed a 28% reduction of days with symptoms and an overall decrease in drug intake of 22%.**

Source - Allergy Centre, Merate Hospital, Italy

- **Trial on the effectiveness of Dust Mite Controller vs Chemical Acaricide showed that both achieved a similar result in controlling dust mite populations in houses.**

Source - Allergy Centre, Merate Hospital, Italy

- **A Double Blind Placebo controlled trial showed that, after 4 months, a significant reduction in symptoms of Rhinorrhea, Nocturnal Cough, Nasal Obstructions & Sneezing, was evident in the group of 20 people aged between 4 - 15.5 years old, using the Dust Mite Controller.**
