

SWISS<sup>+</sup>  
BLEACH

MADE IN SWITZERLAND

The gentle method for  
**white teeth**

sensitive whitening tooth cream with **TripleWhiteComplex**

WHITENING REPAIR PROTECT removes tooth discolorations and dental plaque, strengthens the enamel and the gums, protects against caries, prevents tartar build-up, reduces tooth sensitivity, ensures fresh breath and has a low abrasive value (RDA).

## sensitive whitening

**White teeth:** Gentle yet efficient tooth whitening through oxygen release thanks to minimal peroxide concentration (<0.1%). Rounded silicate cleaning granules, innovative polymers\* and natural enzymes from figs and papaya support the whitening effect by gently removing dental plaque and tooth discolorations (from coffee, wine, tobacco, and tea).

Result: bright white teeth after only a few days of regular use\*\*

## protect & repair

**Caries protection & prophylaxis:** Fluor makes teeth more resistant to caries. It protects against demineralization while at the same time supporting enamel remineralization.

**Sensitive teeth:** in case of worn out enamel or even exposed necks of teeth, potassium chloride reduces irritation transmission to the dental nerve. As a result, the teeth are less sensitive to cold, warmth and mechanical stimuli.

**Tartar:** tetra-sodium pyrophosphate is capable of reducing the new formation of tartar.

**Gingiva:** Allantoin, vitamin B5, ginkgo and Echinacea extract help preserve healthy gums and an intact oral micro-flora.

**RDA:** thanks to its low abrasive value with high cleaning effect, enamel abrasion during brushing is reduced to a minimum. Suitable for daily use.

## how to use the product

Clean your teeth three times a day, each time for 2 minutes. Not suitable for children under 12. Swissbleach does not harm your enamel nor your gums. If you have heavily exposed necks of teeth, the use of the product is not recommended.
